Expertise

- Front-end (HTML, XML, CSS)
- Back-end (Java, Python, Visual Basic)
- Android Dev

Experience

2023-Present
Work From Home

FREELANCER

Although my job is accomplishing other student's thesis, applications and mini task that allowed my to have income, I consider my sideline as freelancing. As a student, I pulled it off by managing my time. One of my works is a prototype of a school cashier system that I made in android studio using the language java and xml for the design. Also I am accepting commissions offered by other students that are not capable of accomplishing their dissertations. This job taught me self-management and confidence in accepting a role even it is completely new for me.

2020
Jollibee | Lot 98 A. Bonifacio St, cor Padre Jose Ma. Burgos St, Biñan, Laguna

KITCHEN CREW

My specific job is a Grill Cook which is assigned to cook patties and assemble burgers and other food that is included in my station. This job let me experience working in times of pressure. As the location of the franchise is situated in a very crowded part of the city. Resting is not an option except for break time. It taught me to be cool-headed, to multi-taskand to always accomplish a task on time.

2019
Ryonan Electric Philippines Corporation | East Main Avenue, Barangay Loma, Binan City 4024 Laguna

PRODUCTION CREW

My job as production crew is what the company called HR-Tap which is a generalized type of production role. Whenever there is a station that misses one of its members we're the one that replaces them within that day. It enhanced my skill "adaptability". Despite being unrelated to the programming industry. It helped me develop the trait that I need as an Aspiring Full-Stack developer.
